

Final MIS Enhancement Scope

ANTI AI Financial Command Center — System Upgrade

1. Objective

The purpose of this enhancement phase is to evolve the current MIS platform from a static financial reporting dashboard into a dynamic operational finance and forecasting system suitable for a multi-vertical startup environment.

The enhancements focus on:

- operational usability,
- forecasting flexibility,
- document traceability,
- dynamic budgeting,
- and real-time financial visibility.

The upgraded system should remain:

- lightweight,
 - startup-friendly,
 - real-time,
 - and highly configurable by management users.
-

2. Enhancement Scope Summary

The following major enhancements are required:

Module	Enhancement
Daily Logs	Business Unit, Invoice upload & retrieval
Financial Analysis	Actual vs Forecast vs Target
Financial Analysis	Advanced time filters
Project Tracker	Timeline filtering
Department Tracker	Dynamic budget allocation
3-Month Forecast	Exponential smoothing forecasting

3. Daily Logs Enhancement

Current Problem

The current transaction logging system captures:

- revenue,
- expenses,
- departments,
- customers,
- and projects,

but lacks:

transaction-level document storage & business unit level analysis

This creates:

- invoice retrieval dependency,
- operational inefficiency,
- and audit friction.

Required Enhancement

When logging:

- revenue,
OR
- expense transactions,

the user should be able to:

- ☒ Upload invoice/supporting document
- ☒ Store it against transaction ID
- ☒ Preview/download later, if possible download all between a time frame
- ☒ Segregation of revenue sources

Recommended Structure

Additional Fields

Field	Purpose
Invoice File URL	File storage reference
Invoice Number	Reference tracking

Recommended Workflow

While Adding Transaction

User enters:

- transaction details,
- amount,
- department/project/customer/business unit,
- and uploads invoice.

System:

- stores file,
- links file to transaction,
- generates retrievable reference.

Business Benefits

- ✓ Audit readiness
 - ✓ Faster financial verification
 - ✓ Easier compliance management
 - ✓ Improved operational traceability
-

4. Financial Analysis Enhancement

Actual vs Forecast vs Target Monitoring

Current Problem

The financial analysis module currently shows:

- actual revenue,
- expense trends,
- and profitability,

but lacks:

predictive comparison visibility.

There is currently no integrated:

- actual vs forecast,
- or target monitoring layer.

Required Enhancement

The financial analysis section should display:

Metric	Actual	Forecast	Target	Variance
Revenue	₹X	₹Y	₹Z	+/-
Expenses	₹X	₹Y	₹Z	+/-
Profit	₹X	₹Y	₹Z	+/-

Required Features

Feature	Requirement
Forecast integration	Yes
Manual target editing	Yes
Real-time recalculation	Yes
Variance indicators	Yes

Recommended Variance Logic

Revenue Variance

Variance = Actual Revenue - Target Revenue

Forecast Variance

Forecast Gap = Forecast Revenue - Target Revenue

Recommended Status Indicators

Condition	Signal
Above Target	Green
Near Target	Orange
Below Target	Red

5. Financial Analysis Enhancement

Advanced Time Filtering

Current Problem

The current reporting structure lacks:

- flexible time slicing,
- multi-period comparison,
- and financial year controls.

Required Enhancement

Users should be able to filter data by:

Filter Type	Requirement
Monthly	Yes
Quarterly	Yes
Yearly	Yes

Filter Type	Requirement
Financial Year	Yes
Multiple FY Selection	Yes

Recommended Logic

The system should derive all period calculations dynamically from:

Current system date and transaction timestamps

Recommended FY Logic

Example:

FY	Range
FY 2025–26	Apr 2025 – Mar 2026
FY 2026–27	Apr 2026 – Mar 2027

Business Benefits

- ☒ Better historical comparisons
- ☒ Cross-FY trend visibility
- ☒ Quarterly management reporting
- ☒ Flexible strategic analysis

6. Project Tracker Enhancement

Timeline Filtering

Current Problem

The project tracker currently provides:

- project-level profitability,
- revenue,
- expenses,
- and transaction counts,

but lacks:

temporal filtering controls.

Required Enhancement

Users should be able to filter projects based on:

Timeline Filter	Requirement
Current Month	Yes
Previous Month	Yes
Quarter	Yes
Custom Date Range	Yes
Financial Year	Yes

Recommended Use Cases

Examples:

- “Show Q1 project profitability”
- “Show current FY enterprise projects”
- “Compare previous quarter margins”

Business Benefits

- ☒ Better project trend visibility
- ☒ Period-wise profitability analysis
- ☒ Easier strategic review

7. Department Tracker Enhancement

Dynamic Budget Allocation System

Current Problem

Department budgets currently rely on:

- fixed static percentages.

These percentages:

- cannot adapt dynamically,
- and are disconnected from forecasted expenses.

Required Enhancement

Department allocation percentages should become:

user-editable and forecast-linked.

Recommended Budget Logic

Formula

Department Budget = Forecasted Expense × Allocation %

Example

If: Forecast Expense = ₹10L and Marketing Allocation = 20%

then: Marketing Budget = ₹2L

Required Features

Feature	Requirement
Editable department %	Yes
Real-time recalculation	Yes
Current month forecast linkage	Yes
Auto variance update	Yes

Recommended Operational Flow

Forecast updates

↓

Department budgets auto-adjust

↓

Budget utilization recalculates

↓

Overspend alerts refresh automatically

8. 3-Month Forecast Enhancement

Exponential Smoothing Forecasting

Current Problem

The existing forecast logic appears:

- static,
- assumption-heavy,
- and insufficiently adaptive.

The startup environment requires: **lightweight adaptive forecasting.**

Recommended Forecasting Method

Use:

Exponential Smoothing

because it:

- reacts faster to trend changes,
- handles volatility better,
- and remains mathematically simple.

Recommended Formula

Forecast Formula

$$F_{t+1} = \alpha A_t + \alpha 2A_{t-1} + \alpha 3A_{t-2}$$

Where:

Symbol	Meaning
F_{t+1}	Next forecast
A_t	Actual current value
α	Smoothing factor

Recommended Alpha Controls

Users should be able to adjust:

Parameter	Range
-----------	-------

Alpha	0.1 – 0.9
-------	-----------

Sum of all three alpha values should be 1

Recommended Interpretation

Alpha Value	Behavior
Low Alpha	Stable, slower reaction
High Alpha	Faster reaction to volatility

Recommended Scope

Apply exponential smoothing separately to:

- revenue forecasts,

- and expense forecasts.
-

Recommended Data Scope

Forecast calculations should use:

- latest rolling transaction periods,
 - and dynamically update daily.
-

9. System-Wide Architectural Rule

The upgraded system should follow one core principle:

“All calculations must be dynamically date-aware.”

No:

- hardcoded months,
- static periods,
- or fixed forecast windows
should exist anywhere in the system.

All logic should derive from:

- current system date,
 - transaction timestamps,
 - and live operational inputs.
-

10. Final Recommendation

The current MIS platform already provides a strong operational and analytical foundation.

The next phase should focus on:

- forecasting adaptability,
- financial flexibility,
- operational traceability,
- and real-time management visibility.

The proposed enhancements will transform the system into:

a lightweight operational finance intelligence platform

capable of supporting:

- startup volatility,
- multi-vertical growth,
- dynamic budgeting,
- and rolling financial forecasting

without introducing unnecessary enterprise complexity.
